SUMMARY

I work in two crafts. As a motion designer I direct and build ads and product films in code, with three.js, WebGL shaders and Canvas and an AI pipeline for voice and sound that I built myself. As a developer I have about two years of hands-on experience shipping TypeScript and JavaScript products end to end: real-time systems, background job queues, Postgres schemas, bots and AI voice features. I own work from the first idea to the final frame or the deployed feature.

AI ENGINEERING SERVICES

Available as a consultant or a hands-on engineer. I build voice and speech features (including Amharic), LLM features and agents, and AI pipelines that generate, check and deliver content at scale. I also advise teams on where AI fits, build or buy, model choice, privacy and cost per user, through advisory calls, prototypes on their own data, or full end-to-end builds.

EXPERIENCE

AI Motion Designer · Independent

2026 - Present

- Directed and built **Vela Pro**, a 24-second 16:9 launch film for a pro motion-design app: UI panels lifting out of the window, a live graph editor and a shared timeline, scored with a full sound-design mix.
- Directed and built **Be AI**, a 24-second Amharic ad for an AI tutoring app, delivered in 4K (9:16), with a 3D phone showing real lesson screens, an ElevenLabs voice-over and recorded sound effects.
- Made **Unhaunt**, a 36-second narrated explainer ad with clay-style 3D ghosts, its animation timed word by word to an AI voice-over.
- Produced **Kōri**, a 15-second 4:5 product film for a yuzu soda, and **Pulse One**, a 10-second 3D smartwatch teaser with studio lighting and camera moves.
- Built my own motion and sound pipeline: deterministic timelines in three.js and Canvas, frame-by-frame review, MP4 export up to 4K, AI voice-over (ElevenLabs, Chatterbox, Kokoro), real recorded foley, and mixes at –14 LUFS for social.
- Designed and coded this portfolio, including a real-time WebGL ray-marched form that morphs into the showreel.

Full-Stack & AI Engineer · Freelance and independent products

2024 - Present

HabeshaTTS, AI voice donations for Amharic-speaking streamers · habeshatts.com

- Designed and built the platform: donors send a message through a Telegram bot, it is converted to Amharic speech and played on the streamer's overlay in real time.

- Built real-time delivery with Node.js, Express and Socket.IO, with a sequential audio queue so donations play in order without overlapping.
- Ran speech synthesis as background jobs on BullMQ and Redis, with Google Cloud and Gemini TTS, including handling moderation errors and endpoint failures.
- Designed the PostgreSQL data model for donors, streamers and balances, plus a wallet with Telebirr top-ups that admins verify before crediting.
- Built the React, Vite and Tailwind frontend and deployed across Vercel, Render and managed Postgres and Redis (Supabase, Neon, Upstash).

UrbanExplore, restaurants, events and ride booking for Addis Ababa · urbanexplore.netlify.app

- Built a Turborepo monorepo with a Next.js web app on Supabase Auth and PostgreSQL, plus an internal NestJS, Prisma and PostGIS service.
- Implemented role-based access for customers, restaurant partners, organizers and admins with Row Level Security and server-side functions that derive identity from the signed-in user.
- Shipped reservations with a duplicate-slot guard, event ticketing, a "My Plans" area with reminders and a ride planner with maps.
- Hardened the app with Zod validation, security headers and rate limiting; set up GitHub Actions CI, auto-deploy to Netlify and a Playwright suite that runs against the live site.

SKILLS

Motion & 3D	three.js, WebGL and GLSL shaders, Canvas 2D, SVG and CSS animation, kinetic typography, ffmpeg
Voice & sound	ElevenLabs, Chatterbox and Kokoro TTS, Google Cloud and Gemini TTS, recorded foley, mixing and loudness
Languages	TypeScript, JavaScript, SQL, HTML, CSS
Frontend	React, Next.js, Vite, Tailwind CSS, React Router
Backend & data	Node.js, Express, NestJS, REST APIs, Socket.IO, BullMQ, Redis, PostgreSQL, Prisma, Supabase, Neon, Firebase
AI engineering	LLM features and agents (Gemini, Claude, OpenAI, Vertex AI, Ollama), voice and TTS pipelines, AI job queues, prompt design and quality checks, Telegram Bot API
Tooling	Docker, Git and GitHub, GitHub Actions, Playwright, Turborepo, Vercel, Render, Netlify, Linux and WSL

EDUCATION

BSc Computer Science
Unity University, 2021 – 2025

LANGUAGES

Amharic (native)
English (fluent)
